Description :

Heavy Ion Collisions with CMS

Laboratoire Leprince-Ringuet

two postdoctoral positions

The CMS heavy-ion group at the Laboratoire Leprince-Ringuet of École polytechnique (Palaiseau, France) is looking for two postdoctoral fellows. The group is involved in quarkonium, heavy flavour, reconstructed jet and electroweak boson measurements. The fellows will primarily analyse the proton-lead collisions that the LHC will provide in January-February 2013, though analyses of the 2011 PbPb data are also possible. Other activities will also be encouraged : preparation of the upcoming runs and/or related phenomenological studies.
